Cat. No. CP-0110

CentriPure P2

Gel filtration column
for 200 µl sample volume

Cat. No. CP-0106

CentriPure P5

Gel filtration column
for 0.5 ml sample volume

Cat. No. CP-0107

CentriPure P10

Gel filtration column
for 1.0 ml sample volume

Cat. No. CP-0108

CentriPure P25

Gel filtration column
for 2.5 ml sample volume

Cat. No. CP-0113

CentriPure P50

Gel filtration column
for 5.0 ml sample volume

Cat. No. CP-0131

CentriPure P500

Gel filtration column
for 50 ml sample volume

Cat. No. CP-0132

CentriPure Dolly Mix

Assorted columns for
protein purification
Five each of P2, P5, P10
and P25 columns

Cat. No. CP-9914

LabRack for CentriPure columns

The LabRack column
processing station makes
purification easy and
convenient

CentriPure P100

**Hydrated gel filtration column
for protein purification**

Instructions for use

1. Column Preparation

Remove the cap from the top and then the bottom cap of the **CentriPure P100** column.

Allow excess column fluid to drain (via gravity) into a suitable waste reservoir.

2. Column Equilibration

Choose a buffer for your specific application and use this same buffer for both equilibration and elution steps.

To equilibrate the column, allow the equilibration buffer to enter the gel bed completely and continue elution until approximately 100 ml of buffer has been eluted.

3. Sample Application

Transfer 10 ml sample to the **CentriPure P100** column.

Allow the sample to enter the gel bed completely.

4. Elution

Place a tube for sample collection under the **CentriPure P100** column. Transfer 14 ml of elution buffer to the column and elute the cleaned sample.

typical application examples:

Desalting of protein solution (1 mg albumin (OvA) in 10 ml 0.8 M NaCl), elution with water

Elution profile overlay of albumin (10 mg OvA, black line – 280 nm) and free dye (5 µmol FAM, orange line – 490 nm) in NaHCO₃, elution with water (10 ml sample volume)
